

TECHNICAL SPECIFICATIONS & SYSTEM REQUIREMENTS

LawBase is a .NET, fully threaded, multi-tiered application created in the C# programming language. It utilizes the Microsoft SQL database as its database engine. Clients can execute directly using Windows 7, Vista or XP SP3. Alternatively, clients can use nothing more than a web browser and connect to an application server. In the table below, the specifications are based on typical usage and can vary widely based on individual requirements. Please contact Synaptec Software for assistance.

WORKSTATION	Client/Server	Hardware	Pentium Core 2 Duo - 2GB RAM - 50MB available hard disk space
		Software	Windows XP SP3, Vista or 7
	Browser based	Internet Explorer 7.0 or higher. Also requires appropriate application server, contact Synaptec Software for details.	
DATABASE SERVER	Hardware	Dual Core Xeon – 4GB RAM – RAID 5 Hard Drive array	
	Operating System	Microsoft Windows Server 2003 or 2008	
	Database Software	Microsoft SQL Server 2000, SQL 2005 or SQL 2008 (All defaults used on installation including Dictionary order and case insensitive). Smaller database engines such as Microsoft SQL Express may be acceptable for some installations.
